Preface	xiii
----------------------	------

Chapter 1: Ordinary Differential Equations in the Physical Sciences	1
--	---

1.1 Introduction	1
-------------------------------	---

1.1.1 Definitions.....	1
Differential Equations, Unknown Functions, and Initial Conditions.....	1
Order of a Differential Equation.....	3
Partial Differential Equations.....	4
Initial Value and Boundary Value Problems.....	4

Exercises for Sec. 1.1.....	5
-----------------------------	---

1.2 Graphical Solution of Initial-Value Problems	5
---	---

1.2.1 Direction Fields; Existence and Uniqueness of Solutions.....	5
1.2.2 Direction Fields for Second-Order ODEs: Phase-Space Portraits.....	9
Phase-Space.....	9
Conservation of Phase-Space Area.....	11
Hamiltonian Systems.....	12

Exercises for Sec. 1.2.....	14
-----------------------------	----

1.3 Analytic Solution of Initial-Value Problems via DSolve	17
---	----

1.3.1 DSolve	17
---------------------------	----

Exercises for Sec. 1.3.....	20
-----------------------------	----

1.4 Numerical Solution of Initial-Value Problems	23
---	----

1.4.1 NDSolve	23
1.4.2 Error in Chaotic Systems.....	27
A Chaotic System: The Driven Pendulum.....	27
The Lyapunov Exponent.....	29
1.4.3 Euler's Method.....	31
1.4.4 The Predictor-Corrector Method of Order 2.....	38
1.4.5 Euler's Method for Systems of ODEs.....	41
1.4.6 The Numerical N -Body Problem: An Introduction to Molecular Dynamics.	43
Exercises for Sec. 1.4.....	50
1.5 Boundary-Value Problems	62
1.5.1 Introduction.....	62
1.5.2 Numerical Solution of Boundary-Value Problems: The Shooting Method...	64
Exercises for Sec. 1.5.....	67
1.6 Linear ODEs	70
1.6.1 The Principle of Superposition.....	70
Linear ODEs of order N	70
Linear Differential Operators.....	70
The Superposition Principle.....	71
1.6.2 The General Solution to the Homogeneous Equation.....	71
Introduction.....	71
Different Functional Forms for the General Solution.....	73
1.6.3 Linear Differential Operators and Linear Algebra.....	74
1.6.4 Inhomogeneous Linear ODEs.....	78
Homogeneous and Particular Solutions.....	78
Method of Undetermined Coefficients.....	79
Response to Sinusoidal Forcing.....	79
Resonance.....	82

Exercises for Sec. 1.6.....	84
References.....	86
Chapter 2: Fourier Series and Transforms.....	87
2.1 Fourier Representation of Periodic Functions.....	87
2.1.1 Introduction.....	87
2.1.2 Fourier Coefficients and Orthogonality Relations.....	90
2.1.3 Triangle Wave.....	92
2.1.4 Square Wave.....	95
2.1.5 Uniform and Nonuniform Convergence.....	97
2.1.6 Gibbs Phenomenon for the Square Wave.....	99
2.1.7 Exponential Notation for Fourier Series.....	102
2.1.8 Response of a Damped Oscillator to Periodic Forcing.....	105
2.1.9 Fourier Analysis, Sound, and Hearing.....	106
Exercises for Sec. 2.1.....	109
2.2 Fourier Representation of Functions Defined on a Finite Interval.....	111
2.2.1 Periodic Extension of a Function.....	111
2.2.2 Even Periodic Extension.....	113
2.2.3 Odd Periodic Extension.....	116
2.2.4 Solution of Boundary-Value Problems Using Fourier Series.....	118
Exercises for Sec. 2.2.....	121
2.3 Fourier Transforms.....	122

2.3.1 Fourier Representation of Functions on the Real Line.....	122
2.3.2 Fourier sine and cosine Transforms.....	129
2.3.3 Some properties of Fourier Transforms.....	131
Fourier Transforms as Linear Integral Operators.....	131
Fourier Transforms of Derivatives and Integrals.....	131
Convolution Theorem.....	132
The Uncertainty Principle of Fourier Analysis.....	133
2.3.4 The Dirac δ -Function.....	135
Introduction.....	135
Integral of a δ -Function.....	136
δ -Functions of More Complicated Arguments.....	136
Generalized Fourier Integrals.....	137
Derivatives of a δ -Function.....	139
Heaviside Step Function.....	140
Connection of Fourier Transforms to Fourier Series.....	141
2.3.5 Fast Fourier Transforms.....	144
Discrete Fourier Transforms.....	144
Fast Fourier Transforms.....	151
2.3.6 Response of a Damped Oscillator to General Forcing. Green's Function for the Oscillator.....	158
Exercises for Sec. 2.3.....	164
2.4 Green's Functions.....	169
2.4.1 Introduction.....	169
2.4.2 Constructing the Green's Function from Homogeneous Solutions.....	171
Second-Order ODEs.....	171
Example.....	173
Nth Order ODEs.....	173
2.4.3 Discretized Green's Function I : Initial-Value Problems by Matrix Inversion.....	174
2.4.4 Green's Function for Boundary-Value Problems.....	178

2.4.5 Discretized Green's Functions II: Boundary-Value Problems by Matrix Inversion	181
Theory for Second-Order ODEs	181
Example	185
Exercises for Sec. 2.4	187
References	190
Chapter 3: Introduction to Linear Partial Differential Equations	191
3.1 Separation of Variables and Fourier Series Methods in Solutions of the Wave and Heat Equations	191
3.1.1 Derivation of the Wave Equation	191
Introduction	191
String Equilibrium	191
String Dynamics: The Wave Equation	193
3.1.2 Solution of the Wave Equation Using Separation of Variables	195
Solution of the Wave Equation for a Uniform String and Fixed Ends	195
Examples	199
Static Sources and Inhomogeneous Boundary Conditions	203
Summary	206
3.1.3 Derivation of the Heat Equation	206
Heat Flux	206
Energy Conservation	207
The Heat and Diffusion Equations. Dirichlet, von Neumann and Mixed Boundary Conditions	208
3.1.4 Solution of the Heat Equation Using Separation of Variables	210
Introduction	210
Static Boundary Conditions and a Static Source	210
Homogeneous von Neumann Boundary Conditions	217
Homogeneous Mixed Boundary Conditions	220
Summary	223

Exercises for Sec. 3.1.....	224
3.2 Laplace's Equation in Some Separable Geometries.....	231
3.2.1 Existence and Uniqueness of the Solution.....	232
3.2.2 Rectangular Geometry.....	233
General Solution.....	233
Example 1: Dirichlet Boundary Conditions.....	234
Example 2: von Neumann Boundary Conditions; the Current Density in a Conducting Wire.....	236
3.2.3 2D Cylindrical Geometry.....	238
Separation of Variables.....	238
Example.....	239
3.2.4 Spherical Geometry.....	240
Separation of Variables.....	240
Eigenmodes in θ : Associated Legendre Functions.....	241
Spherical Harmonics.....	243
Example.....	245
3.2.5 3D Cylindrical Geometry.....	247
Introduction.....	247
Nonzero Potential on One Cylinder End: Bessel Functions.....	248
Nonzero Potential on the Cylinder Sides: Modified Bessel Functions.....	254
Exercises for Sec. 3.2.....	256
References.....	260
 Chapter 4: Eigenmode Analysis.....	 261
4.1 Generalized Fourier Series.....	261
4.1.1 Inner Products and Orthogonal Functions.....	261
Definition of an Inner Product.....	261
Sets of Orthogonal Functions. The Gram- Schmidt Method.....	262
4.1.2 Series of Orthogonal Functions.....	266

4.1.3 Eigenmodes of Hermitian Operators.....	268
Hermitian Operators, and Sturm-Liouville Problems.....	268
Eigenmodes.....	270
Completeness.....	271
4.1.4 Eigenmodes of Non-Hermitian Operators.....	272
Exercises for Sec. 4.1.....	273
4.2 Beyond Separation of Variables: The General Solution of the 1D Wave and Heat Equations.....	277
4.2.1 Standard Form for the PDE.....	278
4.2.2 Generalized Fourier Series Expansion for the Solution.....	280
General Solution for the Wave Equation.....	280
Wave Energy.....	282
Example 1: Temperature Oscillations.....	283
Example 2: Cracking the Whip.....	287
Exercises for Sec. 4.2.....	294
4.3 Poisson's Equation in Two and Three Dimensions.....	300
4.3.1 Introduction. Uniqueness and Standard Form.....	300
4.3.2 Green's Function.....	301
4.3.3 Expansion of g and ϕ in Eigenmodes of the Laplacian Operator.....	302
4.3.3 Eigenmodes of ∇^2 in Separable Geometries	304
Introduction.....	304
Rectangular Geometry.....	305
Cylindrical Geometry.....	312
Spherical Geometry.....	317
Exercises for Sec. 4.3.....	324
4.4 The Wave and Heat Equations in Two and Three Dimensions.....	333
4.4.1 Oscillations of a Circular Drumhead.....	334
General Solution.....	334

Drumhead Eigenmodes.....	336
Travelling Waves in θ	338
Sources and Inhomogeneous Boundary Conditions.....	339
4.4.2 Large Scale Ocean Modes.....	340
4.4.3 The Rate of Cooling of the Earth.....	344
Exercises for Sec. 4.4.....	346
References.....	354
Chapter 5: Partial Differential Equations in Infinite Domains.....	355
5.1 Fourier Transform Methods.....	356
5.1.1 The Wave Equation in One Dimension.....	356
Travelling Waves.....	356
General Solution.....	358
5.1.2 Dispersion; Phase and Group Velocities.....	359
The Shrödinger Equation for a Free Particle Moving in One Dimension.....	359
Group Velocity.....	363
Dispersion.....	365
5.1.3 Waves in Two and Three Dimensions.....	366
Shrödinger's Equation in Three Dimensions.....	366
Group Velocity in an Isotropic Medium.....	368
The Wave Equation in Three Dimensions.....	368
Response to a Source.....	379
Wave Propagation in an Anisotropic Medium.....	382
Heat Equation.....	384
Exercises for Sec. 5.1.....	386
5.2 The WKB method.....	396
5.2.1 WKB Analysis without Dispersion.....	396
The Eikonal.....	396

Example: Waves on an String with Varying Mass Density.....	402
WKB Method for Problems that Vary Slowly in Time: Adiabatic Invariance..	404
WKB Wavepackets.....	407
WKB Waves in Two Dimensions: Water Waves Near the Shore.....	410
Ray Trajectories.....	412
5.2.2 WKB with Dispersion: Geometrical Optics.....	415
Wave-Packet Trajectory.....	415
Hamiltonian Mechanics as the WKB Limit of Quantum Mechanics.....	419
Turning Points.....	421
Wave-Packet Amplitude.....	422
Exercises for Sec. 5.2.....	424
5.3 Wave Action (Electronic Version Only)	
5.3.1 The Eikonal Equation	
5.3.2 Conservation of Wave Action	
Exercises for Sec. 5.3	
References.....	432

Chapter 6: Numerical Solution of Linear Partial Differential Equations.....435

6.1 The Galerkin Method.....	435
6.1.1 Introduction.....	435
6.1.2 Boundary-Value Problems.....	435
Theory.....	435
Example 1.....	438
Example 2.....	442
Example 3.....	446
6.1.3 Time-Dependent Problems.....	451
The Heat Equation.....	451
Reflection of a Quantum Particle From a Barrier.....	457
Exercises for Sec. 6.1.....	461

6.2 Grid Methods	464
6.2.1 Time-Dependent Problems.....	464
FTCS Method for the Heat Equation.....	464
Von Neumann Stability Analysis.....	467
CTCS Method.....	469
Lax Method.....	469
Implicit Methods. The Crank-Nicolson Algorithm.....	470
Von Neumann and Mixed Boundary Conditions.....	474
Multiple Spatial Dimensions.....	477
6.2.2 Boundary-Value Problems.....	486
Direct Solution.....	486
Nonrectangular Boundaries.....	489
Relaxation Methods.....	494
FFT Method.....	499
Exercises for Sec. 6.2.....	504

6.3 Numerical Eigenmode methods (Electronic version only)

6.3.1 Introduction

6.3.2 Grid-Method Eigenmodes

General Theory

Example 1: 1D Heat Equation with Mixed Boundary Conditions

Example 2: 2D Drumhead Eigenmodes

6.3.3 Galerkin-Method Eigenmodes

General Theory

Example 1: 1D Quantum Harmonic Oscillator Eigenmodes

Example 2: 2D Drumhead Eigenmodes

6.3.4 WKB Eigenmodes

The Wave Equation

Eigenmode Correction Using the Shooting Method

Eigenvalues in the Presence of Turning Points

Example: Quantum Harmonic Oscillator Frequencies

Shooting Method for Problems with Turning Points

Exercises for Sec. 6.3

References.....	510
------------------------	------------

Chapter 7: Nonlinear Partial Differential Equations

.....511

7.1 The Method of Characteristics for First-Order PDES.....	511
--	------------

7.1.1 Characteristics.....	511
----------------------------	-----

7.1.2 Linear Cases.....	513
-------------------------	-----

Example 1 : $s = 0$ and $v(x, t, f) = c$	514
--	-----

Example 2 : $s = a x^n$ and $v = b x$	515
---	-----

Example 3: Mixing Dye.....	516
----------------------------	-----

Example 4: The Collisionless Boltzmann Equation.....	519
--	-----

7.1.3 Nonlinear Waves.....	529
----------------------------	-----

A First-Order Nonlinear Wave Equation.....	529
--	-----

Solution.....	530
---------------	-----

Wavebreaking Time.....	532
------------------------	-----

Exercises for Sec. 7.1.....	534
-----------------------------	-----

7.2 The K-dV Equation.....	536
-----------------------------------	------------

7.2.1 Shallow-Water Waves with Dispersion.....	536
--	-----

7.2.2 Steady Solutions: Cnoidal Waves and Solitons.....	537
---	-----

7.2.3 Time-Dependent Solutions: the Galerkin Method.....	546
--	-----

Introduction.....	546
-------------------	-----

Example 1: Cnoidal Wave.....	548
------------------------------	-----

Example 2: Interacting Solitons.....	550
--------------------------------------	-----

Example 3: Suppression of Wavebreaking.....	551
---	-----

7.2.4 Shock waves: Burgers' Equation.....	554
---	-----

Steady Solutions.....	554
-----------------------	-----

CTCS/Crank-Nicolson Approach.....	556
-----------------------------------	-----

Exercises for Sec. 7.2.....	560
7.3 The Particle-in-Cell Method (Electronic Version Only)	
7.3.1 Galactic Dynamics	
7.3.2 Strategy of the PIC Method	
7.3.3 Leapfrog Method	
7.3.4 Force	
1) Mass Density on the Grid	
2) FFT for the Potential	
3) Interpolation of the Force From the Grid to Particle Positions	
7.3.5 Examples	
Code Tests	
Gravitational Collapse in a Cold Gas	
Stability of a Hot Gas to Gravitational Collapse	
Rotation	
Exercises for Sec. 7.3	
References.....	566
 Chapter 8: Introduction to Random Processes.....567	
8.1 Random Walks.....	567
8.1.1 Introduction.....	567
8.1.2 The Statistics of Random Walks.....	568
The Random Walk Model.....	568
Simulations.....	569
The Binomial Distribution.....	575
Averages.....	578
The Heat and Fokker-Planck Equations from the Random Walk Model.....	581
Exercises for Sec. 8.1.....	586
 8.2 Thermal Equilibrium.....	 592

8.2.1 Random Walks with Arbitrary Steps.....	592
Averages.....	592
Conditional Probability and the Master Equation.....	594
Correlation Functions.....	595
Inhomogeneous Random Walks.....	596
8.2.2 Simulations.....	598
Transformation Method.....	598
Rejection Method.....	599
Two Simulations of a Random Walk with Bias.....	601
8.2.3 Thermal Equilibrium.....	605
The Boltzmann Distribution.....	605
Einstein Relations.....	606
Irreversibility and the Free Energy.....	607
Comparison with Simulations.....	607
Exercises for Sec. 8.2.....	609
8.3 The Rosenbluth-Teller-Metropolis Monte Carlo method (Electronic Version Only)	
8.3.1 Theory	
8.3.2 Simulations	
Example 1: Ideal Gas in Gravity	
Example 2: Lennard-Jones Clusters	
Exercises for Sec. 8.3	
References.....	615

Chapter 9: Introduction to Mathematica (Electronic Version Only)

9.1 Starting Mathematica

9.2 Mathematica Calculations

9.2.1 Arithmetic

9.2.2 Exact vs. Approximate Results

9.2.3 *Some Intrinsic Functions*

9.2.4 *Special Numbers*

9.2.5 *Complex Arithmetic*

9.2.6 *The Function **N** and Arbitrary-Precision Numbers*

Exercises for Sec. 9.2

9.3 The Mathematica Front End and Kernel

9.4 Using Previous Results

9.4.1 *The % Symbol*

9.4.2 *Variables*

9.4.3 *Palettes and Keyboard Equivalentents*

9.5 Lists, Vectors, and Matrices

9.5.1 *Defining Lists, Vectors, and Matrices*

9.5.2 *Vector and Matrix Operations*

Vector Addition

Dot Product

Matrix Multiplication

Other Matrix Operations

9.5.3 *Creating Lists, Vectors, and Matrices with the Table Command*

9.5.4 *Operations on Lists*

Exercises for Sec. 9.5

9.6 Plotting Results

9.6.1 *The **Plot** Command*

9.6.2 *The **Show** Command*

9.6.3 *Plotting Several Curves on the Same Graph*

9.6.4 The **ListPlot** Function

9.6.5 Parametric Plots

9.6.6 3D Plots

9.6.7 Animations

9.6.8 Add-On Packages

Exercises for Sec. 9.6

9.7 Help for Mathematica Users

9.8 Computer Algebra

9.8.1 Manipulating Expressions

9.8.2 Replacement

9.8.3 Defining Functions

Functions of One Variable

Checking the Definition of a Function

Functions of Several Variables

9.8.4 Applying Functions

9.8.5 Delayed Evaluation of Functions

9.8.6 Putting Conditions on Function Definitions

Exercises for Sec. 9.8

9.9 Calculus

9.9.1 Derivatives

9.9.2 Power Series

9.9.3 Integration

Exercises for Sec. 9.9

9.10 Analytic Solution of Algebraic Equations

9.10.1 Solve and NSolve

One Equation in a Single Variable

Coupled Equations in Several Variables

Linear Equations and Under-Determined Systems

Nonlinear Equations

Exercises for Sec. 9.10

9.11 Numerical Analysis

9.11.1 Numerical Solution of Algebraic Equations

9.11.2 Numerical Integration

9.11.3 Interpolation

9.11.4 Fitting

Reading Data from External Files

Exercises for Sec. 9.11

9.12 Summary of Basic Mathematica Commands

9.12.1 Elementary Functions

9.12.2 Using Previous Results; Substitution and Defining Variables

9.12.3 Lists, Tables, Vectors and Matrices

9.12.4 Graphics

Basic Plotting

Contour and Density Plots

Three-Dimensional Surface Plots

Plotting Lists of Data

Parametric Plots

Some Other Plots

9.12.5 Symbolic Mathematics

Algebraic Equations

Differential Equations
